

## MECHANICAL COLLAR LOCATER

Kline's Collar Locater provides a means of precisely locating casing collars while running tubing. It can be made up in the tubing string at any point and oriented to indicate collar locations while running in or out of the well.

The body of the Collar Locater is constructed of high-strength alloy steel and is of sufficient length to re-cut both box and pin threads several times. The locator blocks are carburized for long wear.

*Available in sizes from 4 1/2" through 8 5/8"*
